Dear Editors,

I am writing to submit the enclosed manuscript, entitled

**“Thermodynamic Morality:
A Formal Proof of Ethics as Entropy Optimization”**

for consideration for publication.

Summary. We present a formal proof establishing the isomorphism between moral law and thermodynamic optimization. By framing behavioral ethics as the minimization of Lagrangian dissipation within a closed sociological frame, we demonstrate that 'Good' is mathematically equivalent to systemic negentropy, and 'Evil' is mathematically equivalent to unrecoverable heat loss (friction) across the collective substrate. This provides a hard physics grounding for ethical imperatives.

This manuscript has not been previously published and is not under consideration at any other journal. I confirm no conflicts of interest.

Cryptographic Lineage & Validation. This mathematical substrate has been cryptographically sealed and tracked on the global Sovereign Master Ledger to prevent retroactive editing and to verify the source authorship. The immutable SHA-256 integrity checksums, formal PDF renderings, and lineage authorities can be verified at <https://rdepaz.com/research>.

Respectfully submitted,
