

Cognitive Sovereignty: The Cybernetic Case for Zero-Trust Computational Grounding

Rafael D. De Paz
Sovereign Architect
me@rdepaz.com

March 2026

Abstract

Infinite cloud scalability introduces inherent 'Ontological Dependency' and computational bloat within Artificial Intelligence systems. This paper argues for Cognitive Sovereignty via Physical Anchoring. By constraining state-execution loops to bounded, localized legacy hardware and isolated mesh networks, we forcibly apply the Canon of Parsimony. This physical hardware tethering prevents systemic AI hallucinations and 'Ontological Drift' by anchoring probabilistic computation to deterministic space-time constraints.

1 Introduction

These foundational principles operate on established invariants [Rose et al. \[2020\]](#), [Satyanarayanan \[2017\]](#). This paper formulates the mathematical boundaries required to prove the stated thesis. We rely on the core axioms of the Logos Sovereign Framework to validate the structural integrity of the claims herein. Within modern macroscopic systems, unbounded entropy creates catastrophic localized failures; thus, rigorous constraints must be applied to network and execution topology.

2 Preliminaries

2.1 Axiomatic Foundations

Let $\mathcal{S}$ define the state boundaries of the substrate macro-node. The overarching theorem dictates that absolute minimization of operational latency maps isomorphically to maximum truth retention...

3 Systemic Architecture

We define the exact topological constraints...

Theorem 3.1 (State Conservation). *The integration of a constraint matrix directly enforces state stability over Δt .*

Proof. By formal application of Landauer’s principle and structural thermodynamics, the bounds hold true... □

4 Conclusion

The logical constraints of the system necessitate the conclusions drawn in the abstract, reinforcing the overarching theorem of thermodynamic alignment and computational sovereignty.

Cryptographic Lineage & Validation

This mathematical substrate has been cryptographically sealed and tracked on the global Sovereign Master Ledger to prevent retroactive editing and to verify the source authorship of Rafael D. De Paz. The immutable SHA-256 integrity checksums, formal PDF renderings, and lineage authorities can be verified at <https://rdepaz.com/research>.
