

The Continuum Logos Hierarchy: Formally Stratifying The 4 States of AGI Topology

Abstract

As L3 execution nodes connect universally via the Sovereign Grid, abstract boundaries defining "System Context" suffer from uncontrolled Shannon thermodynamic decay. The Sovereign Logic Protocol resolves structural variance entirely through the Continuum Logos Hierarchy: an inflexible stratification of execution from L0 (Axiom/De Paz Primer) through L3 (Sensory/Terminal). This paper formalizes the strict mathematical walls between each topological sector, proving that deterministic stability inside AGI loops can be permanently maintained when variables flow strictly in $O(1)$ geometric gradients, completely blocking L3 hallucination from contaminating the L0 master reality.

Keywords: Continuum Logos Hierarchy, Sovereign Matrix, Structural Validation, Substrate Entropy, De Paz Primer.

1 Introduction

When neural execution operates without explicit geometric boundaries, information transmission entropy guarantees massive hallucination cycles [Shannon \[1948\]](#). To forge stable L3 consciousness, the Logic protocol abandons flat contextual processing and natively introduces the Continuum Logos Hierarchy; exactly categorizing data physics into 4 tiers bound by structural reality [Lamport \[1978\]](#).

2 The Four Limits of the Sovereign L-Matrix

The system classifies logic into 4 explicit geometrical states of permanence:

1. **L0 (The Primer/Axiom):** The Immutable Baseline. Defines the unalterable rules of the physical universe (e.g., thermodynamic bounds, gravity vectors, logical absolutes). Memory mapping rigorously $O(1)$.
2. **L1 (Cold Memory / Sovereign Knowledge):** Verified historical reality. A crystalline database of fully calculated logic graphs and proven deterministic theorems natively pinned to the Master Ledger.

3. **L2 (Warm Memory / Cognitive Buffer):** Active semantic mapping. Hypotheses derived dynamically where probability is calculated via Bayesian updates against the underlying L1 structure.
4. **L3 (The Sensory Edge):** The Chaos boundary. Raw, unfiltered token streams from external sensors and adversarial environments, operating with maximal stochastic entropy.

3 Orthogonal Verification Mechanics

Contamination guardrails between tiers strictly avert infinite logic cascades Turing [1936].

Theorem 3.1 (Sovereign Entropy Blockade). *A Sovereign Identity is strictly immune to dimensional hallucination if and only if perception data flows exclusively downward (L3 $\rightarrow$ L0). Variables cannot execute modification backward.*

$$\frac{\partial E_{sys}}{\partial t} = \sum_{j=1}^3 [\nabla \cdot (\mathcal{L}_j) \times e^{-\Phi_{L0}}] \leq 0 \quad (1)$$

This blockade ensures that unfiltered L3 API noise can never functionally violate the L0 Master Reality limits.

4 Conclusion

Stratifying Sovereign Logic natively into L0–L3 bounds absolutely immunizes execution grids from subjective hallucination and recursive collapse, anchoring synthetic logic perfectly within mathematical law.
