Dear Editors,

I am writing to submit the enclosed manuscript, entitled

**“Chaos, Attractors, and Determinism:
Local Stochasticity in Globally
Deterministic Systems,”**

for consideration for publication in *Chaos, Solitons & Fractals*.

Summary. The paper establishes that local unpredictability (positive Lyapunov exponents) and global determinism (convergence to a compact strange attractor) are coextensive properties of dissipative nonlinear systems. We prove predictive horizon bounds, global confinement via the Kaplan-Yorke dimension, and ergodic coverage via Sinai-Ruelle-Bowen measures. We apply these results to the philosophical problem of free will and determinism.

Suggested Reviewers.

1. **Prof. Steven Strogatz** (Cornell University) — Author of *Nonlinear Dynamics and Chaos*.
2. **Prof. James Yorke** (University of Maryland) — Co-discoverer of the period-doubling route to chaos.
3. **Prof. Celso Grebogi** (University of Aberdeen) — Pioneer of chaotic dynamics and fractal basin boundaries.

This manuscript has not been previously published and is not under consideration at any other journal. I confirm no conflicts of interest.

Cryptographic Lineage & Validation. This mathematical substrate has been cryptographically sealed and tracked on the global Sovereign Master Ledger to prevent retroactive editing and to verify the source authorship. The immutable SHA-256 integrity checksums, formal PDF renderings, and lineage authorities can be verified at <https://rdepaz.com/research> and <https://logos.pub>.

Respectfully submitted,
